

Josué Fernández Díaz

Senior Software Engineer | Tech Lead

📍 Costa Rica | Hybrid | Remote 📧 josue.0795@gmail.com [in](#) [in/josuefdz](#)

SUMMARY

Senior Full Stack Software Engineer with 7+ years of experience building and scaling customer-focused SaaS products with Ruby on Rails, React, and AWS. Proven hands-on Tech Lead: owns architecture decisions, leads cross-functional initiatives, and delivers products across the full lifecycle, from discovery to production. Extensive experience working alongside US-based companies and global remote teams. Clear communicator adept at conveying technical direction and strategic decisions to engineering, leadership, and non-technical partners. Committed to clean, maintainable code, engineering excellence, and solutions that create lasting organizational value.

TECHNICAL SKILLS

Programming Languages & Frameworks: Ruby on Rails, Javascript, React, PHP, Python, Typescript, EmberJS, Bootstrap, TailwindCSS.

Backend & Data: REST APIs, PostgreSQL, MySQL, ElasticSearch, Async Process (Sidekiq, RabbitMQ).

Integrations: Stripe, Segment, OneTrust, Google Tag Manager, Stripo.

Cloud & DevOps: AWS, GCP, CI/CD, CircleCI, Git (Github & Gitlab), Bash.

Testing & Monitoring: Playwright, RSpec, Bugsnag, New Relic.

AI: Cursor, Claude Code, Devin, MCP creation and integration, Agentic AI, RAG.

Practices: Agile (Scrum, Kanban, Shape Up), Technical Leadership, Technical Documentation, Hiring & Onboarding.

Tools: Jira, Confluence, Notion, Basecamp, Trello, Figma.

Domains: SaaS, Payments, Billing, Email Delivery, Customer Support Tooling, CRM, E-commerce, Compliance, Security.

Spoken Languages: English (Advanced · C1), Spanish (Native).

EXPERIENCE

Senior Software Engineer - Tech Lead

April 2024 - September 2026

ActiveCampaign (Postmark) · Heredia, Costa Rica

- Served as Tech Lead and primary owner for Postmark & DMARC Digests through major team transitions and restructuring, safeguarding product stability and delivery continuity across the web application, alerting, billing system, end-to-end QA suite.
- Served as technical lead for 6 senior contractors and subject-matter expert for Postmark's billing platform migration, driving system design, ticket breakdown, cross-team alignment, and contractor onboarding to ensure successful execution.
- Spearheaded next-generation template editor over a 10-month initiative, driving technical discovery, cross-functional alignment and executive communication from concept through delivery.
- Owned billing infrastructure end to end: sole owner and resolver of billing incidents and defects, built and maintained the new pricing-tier integration, and executed multiple live changes to production billing data with zero incidents or customer-facing billing errors.
- Served as primary incident responder, leading multiple resolutions and advising management on the trade-off between rapid mitigation and root-cause remediation to restore service fast without accruing technical debt.
- Designed and built a multi-agent framework for AI coding agents with human-in-the-loop write gates and risk-based model routing to control cost, plus an agentic RAG documentation-search MCP server that grounded agents in current vendor docs, increasing personal delivery throughput roughly 10x.
- Scaled team capability by running end-to-end hiring and onboarding for engineers and contractors, creating documentation that accelerated ramp-up and productivity within the first week. Also, authored 30+ documentation pages that turned undocumented release, on-call and domain knowledge into shared, repeatable practice for the team.

TechStack: Ruby on Rails, React, Stripe, RSpec, AWS, Bugsnag, New Relic, Figma, Github.

Software Engineer

August 2023 - April 2024

ActiveCampaign · Heredia, Costa Rica

- Built internal tooling that empowered the L2 Customer Support team to resolve issues without engineering escalation, contributing to a drop in average first reply time from 6 hours to 23 minutes and in escalated-ticket resolution from over 17 days to under 7.
- Established a unit testing baseline for the new React frontend, raising coverage to 95–97% across its three modules with Jest and React Testing Library to enable confident, regression-free releases.
- Rebuilt a legacy PHP support console as a React and TypeScript micro frontend, reaching full feature parity while halving initial load time and making in-app actions 2 times faster.
- Architected the console's Playwright end-to-end testing strategy, with modular environment configuration, reusable fixtures and page objects, and parallel execution, and drove team adoption through documentation and a knowledge-share session.

TechStack: PHP, React, TypeScript, Python, Bash, Playwright, Gitlab.

Fullstack Software Developer

October 2022 - March 2023

Gorilla Logic (Blue Apron) • San José, Costa Rica

- Collaborated with the migration from Braze to Segment for customer data recollection, allowing a better experience and organization for targeted ad system.
- Designed BlueApron's consent preferences in OneTrust and Google Tag Manager to enforce user consent preferences and ensure GDPR compliance, which secured the company and customers alike, aligning the services the product offers and customer expectations.
- Collaborated with cross-functional teams to optimize user data flow and analytics accuracy, enhancing reporting reliability and overall user experience.

TechStack: Ruby on Rails, React, OneTrust, Segment, Google Tag Manager, PostgreSQL, GitHub.

Full Stack Software Engineer

January 2022 - September 2022

Pixel506 (CreativeDrive) • San José, Costa Rica

- Contributed to feature development and maintenance of a large-scale web platform built with Ruby on Rails and EmberJS.
- Reengineered a drag-and-drop onboarding component in JavaScript to improve usability and data entry flow within legacy EmberJS (v1) constraints.
- Supported performance optimization and bug resolution efforts to enhance system stability and scalability.

TechStack: Ruby on Rails 4, EmberJS (v1), JavaScript, PostgreSQL, Git.

Full Stack Engineer

October 2019 - December 2021

SmarterSelect • San José, Costa Rica

- Spearheaded the modernization of SmarterSelect's legacy monolithic platform by upgrading from Rails 4/jQuery to a new Rails 6 API and React-based frontend, improving scalability, maintainability, and developer workflow.
- Rebuilt the application's data table architecture, redesigning the UI with React and optimizing backend queries (eliminating N+1 issues, refining indexing, and caching) to reduce load times from 20+ seconds to under 8 seconds.
- Investigated advanced performance strategies—including Elasticsearch and PostgreSQL JSONB indexing—before implementing optimized SQL queries to improve data retrieval efficiency.
- Overhauled the translation system to enable full multilingual support, allowing SmarterSelect to onboard new global customers within a week regardless of language requirements.

TechStack: Ruby on Rails 6, React, PostgreSQL (JSONB), Elasticsearch, Sidekiq, jQuery (legacy maintenance).

Backend Engineer

January 2019 - September 2019

4Geeks(Daddy) • San José, Costa Rica

- Designed and implemented the backend for a video sperm analysis platform that processed user-submitted videos via mobile uploads, researching and evaluating multiple computer vision algorithms to build a Python-OpenCV solution for accurate sperm detection, count, occlusion, and motility tracking.
- Developed a Django REST API to manage user samples, storing video data in AWS S3 and orchestrating AWS Lambda pipelines for automated analysis, engineering the full data flow from upload to processing and result visualization to ensure accurate, consistent outcomes.
- Built and maintained CI/CD pipelines and testing frameworks (AWS CodePipeline, Django unittest, Runscope, GhostInspector) to automate deployments and maintain reliability.
- Led the entire backend project lifecycle, including planning, task management, QA, and client communication, collaborating closely with the frontend developer for end-to-end integration.

TechStack: Python, Django REST Framework, PostgreSQL, AWS (Lambda, S3, CodePipeline), OpenCV, Runscope, GhostInspector.

EDUCATION

Bachelor in Computing Engineering • Completed

Instituto Tecnológico de Costa Rica • Cartago, Costa Rica • 2015-2019

CERTIFICATIONS

- **Aspiring Leaders Program, ActiveCampaign (2026):** selected for a 16-week leadership development program designed by ActiveCampaign to transition senior individual contributors into people leaders, building practical skills in ownership, team leadership, and managing small-mid teams.
- **Testing and BDD, Udemy (2023):** Testing Ruby with RSpec, Rails 5 BDD with RSpec and Capybara, Cypress with Cucumber
- **Backend and DevOps, Udemy (2023):** Basics of GraphQL with Ruby on Rails, DevOps Beginners to Advanced, The Complete Git Guide
